QUIZ -4

MCQs:

1. Which keyword is used to define the beginning of an if statement in Python?
A) then
B) if
C) when
D) do
2. What is the syntax for an if-else statement in Python?
A) if condition { code block } else { code block }
B) if condition: code block else: code block
C) if condition then { code block } else { code block }
D) if condition: code block else: code block
3. How do you write a short-hand if statement in Python?
A) `if x == 5: print("Yes")`
B) `if (x == 5) print("Yes")`
C) `if x == 5 then print("Yes")`
D) `if x == 5: then print("Yes")`
4. What is the purpose of the `elif` keyword in Python?
A) To define an else-if block
B) To end an if statement
C) To check multiple conditions
D) To combine multiple conditions
5. How do you write a nested if statement in Python?
A) `if x > 5: if x < 10: print("Yes")`
B) `if x > 5 { if x < 10: print("Yes") }`
C) `if x > 5: { if x < 10: print("Yes") }`
D) `if x > 5: if x < 10: print("Yes")`

6. What is the output of the following code?

```
x = 5 if x > 3: print("x is greater than 3") else: print("x is less than or equal to 3")
```

- A) x is greater than 3
- B) x is less than or equal to 3
- C) Error
- D) None

7. What is the purpose of using a short-hand if-else statement in Python?

- A) To improve code readability
- B) To save space
- C) To simplify conditional statements
- D) All of the above

8. How do you write a short-hand if-else statement in Python?

- A) `result = "Yes" if x == 5 else "No"`
- B) `result = "Yes" else "No" if x == 5`
- C) `result = "Yes" ? x == 5 : "No"`
- D) `result = "Yes" if x == 5 then "No"`

9. What is the purpose of using the `match case` statement in Python?

- A) To match a value against multiple patterns
- B) To compare two values
- C) To check if a value is in a list
- D) To create a dictionary

10. Which of the following is NOT a valid comparison operator in Python?

- A) `==`
- B) `!=`
- C) `<>`
- D) `>=`
