QUIZ - 5

MCQs:

1. Which loop in Python is used for iterating over a sequence of elements?

- A) for loop
- B) while loop
- C) do-while loop
- D) repeat-until loop

2. What is the syntax for a for loop in Python?

- A) ``for i in range(5):``
- B) ``for i = 0; i < 5; i++:``
- C) ``for i in (0, 5):``
- D) ``for i from 0 to 5:``

3. How do you exit a loop prematurely in Python?

- A) break
- B) exit
- C) stop
- D) end

4. What is the purpose of the ``continue`` statement in Python?

- A) To skip the rest of the loop and continue with the next iteration
- B) To exit the loop immediately
- C) To restart the loop from the beginning
- D) To pause the loop temporarily

5. What is the output of the following code?

```
for i in range(3):  
    print(i)  
else:  
    print("Done")
```

- A) 0 1 2 Done
- B) 0 1 2
- C) Done
- D) Error

6. How do you write a while loop in Python?

- A) ``while i < 5:``
- B) ``while (i < 5) {``
- C) ``for i in range(5):``
- D) ``for i from 0 to 5:``

7. What is the purpose of the ``else`` block in a for-else statement in Python?

- A) It is executed if the loop is terminated prematurely using a ``break`` statement.
- B) It is executed if the loop completes normally without any ``break`` statements.
- C) It is executed if the loop encounters an error.
- D) It is executed if the loop is infinite.

8. How do you exit a while loop in Python?

- A) break
- B) continue
- C) pass
- D) exit

9. What is the purpose of the `pass` statement in Python?

- A) To skip the rest of the loop and continue with the next iteration
- B) To exit the loop immediately
- C) To do nothing and continue to the next iteration of the loop
- D) To restart the loop from the beginning

10. How do you create a nested loop in Python?

- A) By using multiple `for` or `while` statements inside each other
- B) By using the `nested` keyword
- C) By using the `in` keyword
- D) By using the `range` function
