## Quiz-8

### MCQs:

1. What is a tuple in Python?
  - A) A sequence of characters
  - B) A collection of elements
  - C) A numeric data type
  - D) An immutable object
  
2. How do you create an empty tuple in Python?
  - A) ``tuple()``
  - B) ``[]``
  - C) ``{}``
  - D) ``()``
  
3. How do you access an element in a tuple by index?
  - A) ``tuple(index)``
  - B) ``tuple[index]``

**Address: WsCube Tech, Laxmi Tower, Bhaskar Circle, Jodhpur, Rajasthan, India**

**Mail us at: [info@wscubetech.com](mailto:info@wscubetech.com)**

C) ``tuple.index(index)``

D) ``index(tuple)``

4. What is the result of the following code?

```
numbers = (1, 2, 3, 4, 5)
```

```
print(numbers[2:4])
```

A) (1, 2)

B) (3, 4)

C) (2, 3)

D) (3)

5. How are tuples different from lists in Python?

A) Tuples are mutable, while lists are immutable

B) Tuples are indexed by integers, while lists are indexed by strings

C) Tuples are faster for iteration than lists

D) Tuples can contain elements of different data types, while lists cannot

6. What is the purpose of using tuples in Python?

- A) To store a sequence of elements that need to be modified
- B) To store a sequence of elements that should not be modified
- C) To store a sequence of elements that need to be sorted
- D) To store a sequence of elements that are not related

7. Which of the following is a valid tuple method in Python?

- A) ``reverse()``
- B) ``sort(reverse=True)``
- C) ``append()``
- D) ``count()``

8. How do you concatenate two tuples in Python?

- A) By using the ``+`` operator
- B) By using the ``*`` operator
- C) By using the ``/`` operator
- D) By using the ``-`` operator

9. How do you check if an element exists in a tuple in Python?

- A) By using the `in` keyword
- B) By using the `not in` keyword
- C) By using the `exists` keyword
- D) By using the `has` keyword

10. What is the output of the following code?

```
t = (1, 2, 3)
```

```
x, y, z = t
```

```
print(x, y, z)
```

A) 1 2 3

B) (1, 2, 3)

C) Error

D) None of the above
