Quiz – 10

MCQs:

1. What is a dictionary in Python?

- A) A collection of elements where each element is unique
- B) A collection of elements where order is preserved
- C) A collection of key-value pairs
- D) A collection of elements where duplicates are allowed

2. How do you create an empty dictionary in Python?

- A) ``dict()``
- B) ``{}``
- C) ``[]``
- D) ``{}``

3. What is the result of the following code?

```
d = {"name": "Alice", "age": 30}
```

```
print(d["name"])
```

A) "Alice"

B) "age"

C) 30

D) KeyError

4. How do you add a new key-value pair to a dictionary in Python?

A) `dict.add(key, value)`

B) `dict[key] = value`

C) `dict.insert(key, value)`

D) `dict.update(key, value)`

5. How do you iterate over a dictionary in Python using a `for` loop?

A) `for key in dict:`

B) `for key, value in dict.items():`

C) `for value in dict.values():`

D) `for key, value in dict:`

6. What is the purpose of using keys in a dictionary?

- A) To access values in the dictionary
- B) To store data in the dictionary
- C) To order elements in the dictionary
- D) To ensure uniqueness of elements in the dictionary

7. Which of the following is a valid dictionary method in Python?

- A) ``add()``
- B) ``remove()``
- C) ``popitem()``
- D) ``append()``

8. How do you remove a key-value pair from a dictionary in Python?

- A) ``dict.remove(key)``
- B) ``dict.delete(key)``
- C) ``del dict[key]``

D) ``dict.pop(key)``

9. What is the result of the following code?

```
d = {"name": "Alice", "age": 30}
```

```
d["age"] = 35
```

```
print(d["age"])
```

A) 30

B) 35

C) KeyError

D) TypeError

10. How do you create a nested dictionary in Python?

A) ``{"key": {"nested_key": "value"}}``

B) ``{"key": "nested_key": "value"}``

C) ``{"key": ["nested_key": "value"]}``

D) ``{"key": {"nested_key", "value"}}``
