Function Tasksheet

1. Create a simple function that takes two parameters and returns their sum.
2. Explain the concept of a "return" statement within a function.
3. Create a function that calculates the area of a circle based on its radius and returns the result.
4. Create a recursive function that calculates the factorial of a positive integer.
5. Write a Python function called `calculate_average` that takes a list of numbers as a parameter and returns the average of those numbers.
6. Create a function which checks whether a give number is prime or not.
7. Create a function which check whether a given number is even or not.
8. Create a function which takes a number as a value and find out its factorial, with recursion and without recursion.
9. Create a function named `verify_email`, which takes email as an argument and return True if an email is valid, else it returns False.
10. Create a function named `vowel_count` which takes string as an input argument and return count of vowels inside that string.
11. Write a program that defines a function `sanitize_list()` to remove all duplicate entries from the list that it receives.
